

### **AMENDMENTS TO THE ABSTRACT:**

Replace the Abstract with the following rewritten version:

A foil-type ~~pressure sensorswitching element comprises~~ includes a first carrier foil and a second carrier foil arranged at a certain distance from each other by means of a spacer, ~~said the spacer comprising at least one recess defining an active area of the pressure sensorswitching element.~~ At least two electrodes are arranged in the active area of the ~~pressure sensorswitching element~~ between said first and second carrier foils in such a way that, in response to a pressure acting on the active area of the ~~pressure sensorswitching element~~, the first and second carrier foils are pressed together against the reaction force of the elastic carrier foils and an electrical contact is established between the at least two electrodes. According to the invention, at least one of ~~said the~~ carrier foils ~~comprises~~ includes a multi-layered configuration with at least two layers of different materials.

~~(Figure 1 & figure 5)~~
